

GAIN COMPREHENSIVE ASSET VISIBILITY AND SECURITY CONTEXT WITH **THE AXONIUS PLATFORM**

THE SYSTEM OF RECORD FOR DIGITAL INFRASTRUCTURE

The cyber attack surface has expanded exponentially, challenging security teams to understand the totality of the assets they have and the types of business risks they present.

The Axonius Platform automatically aggregates, normalizes, deduplicates, and correlates asset data from any data source. What you get is a complete asset inventory and the ability to quickly uncover security issues and reliably reduce risk.

USE CASES

Cyber Asset Attack Surface Management

Axonius discovers and unifies all assets and related data to help you identify and act on vulnerabilities, misconfigurations, and control gaps.

SaaS Security Posture Management

Axonius will assess and manage the security of your cloud-based SaaS applications from one central resource.

Vulnerability Management

Axonius lets security teams find, track, map, prioritize, remediate, and report on all vulnerabilities across your entire IT asset estate.
